

CS4500

Sprint 2 first meeting

10/13/2017

For this meeting, we made a plan for what we should finish for sprint 2.

Our objects:

1. We need to find an api that can find the current traffic state that the travelers will go through.
2. We will decide the platform of the application. (website, Java software or something else)
3. We will ask the clients to give us the ppt. and other information we need to start analyze the project.
4. We will use the TAXI company VeriFone Api to determine the fees for Uber and Lyft.
5. We decide the input file format: we decide to take an excel file as the input.
6. We will sort the input: number of bus needed/ the rider information.
7. We discussed about the fees for Uber and Lyft
