

Sprint 4 first meeting

Date: 11/10/2017

Persons attended: all of us

We discussed about the objects of this sprint.

The main object of this sprint is designing and creating the algorithm for planning the route.

1. Dingchang Yang will be responsible for creating the algorithm.
2. Others will help Dingchang Yang to build the algorithm.
3. Rui Zheng and Zechen Jin are responsible for designing the database schema for input and output data.
4. Eventually, Rui Zheng and Zechen Jin are also responsible for connecting the back end code with the front end code (running the algorithm on the input file that the end users upload).
5. Kangming Xu is responsible for design the Java object of the input and output file. He is also responsible for the Jenkin test.
6. Gefei Tian is responsible for writing every Java code for the api that will be used.
7. Most important note: starting from this sprint, all our work needs to adapt to the algorithm, which means all of us will try our best to help Dingchang Yang.
